

PROActiv Energy

Cut your energy use and go green the *right* way using one cost effective solution

- ✓ Want to accelerate your net zero ambitions ahead of the UK's Net Zero by 2050 Target? Start by asking yourself this: *is my building as energy efficient as it could be?*
- ✓ Heating, ventilation and air conditioning (HVAC) account for 40% of a commercial building's energy spend, on average. That's huge. And comes at a hefty cost - financially and environmentally.
- ✓ Cut your energy use. PROActiv Energy will save at least 20% of your HVAC spend, equating to at least 8% of your annual energy bill - but you could be saving more. One of our clients racked up energy savings of 32% in 2022.
- ✓ Stop unnecessary energy wastage and improve the way your building manages and controls energy.

How does PROActiv Energy work?

While your Building Energy Management System (BEMS) tells you if something *hasn't* been achieved, PROActiv Energy goes one step further and tells you *why*. It even offers effective solutions, all with little to no human intervention.

Think of PROActiv Energy as a virtual engineer. This intelligent software sits on your network with a bird's eye view of your estate. It can be paired with any system and takes data from virtually anywhere. It processes, integrates and makes sense of granular data so it can:

- Spot energy use patterns and saving opportunities
- Advise new approaches
- Create tasks and assigns actions
- Track progress
- Generate actionable reports
- Create 'smart service' plans that flag issues and rank them based on business impact, using various criteria (e.g. cost or maintenance urgency). This allows engineers to take a more targeted approach to maintenance.

What will PROActiv Energy do for you?

Save energy – and money

By understanding precisely how and where you're using energy, you can home in on specific energy saving opportunities to slash those energy bills.

Help you achieve net zero carbon

First step to achieving net zero? Maximise your building's energy efficiency. Once you're using energy sparingly, you can purchase green energy while safe in the knowledge it won't go to waste.

Keep your building operating efficiently

Keep your building assets, including your HVAC systems, in good working order with greater longevity.

Make your building 'smarter'

Don't fall behind in an increasingly digital era. Take advantage of the Internet of Things (IOT) to transform your building into an autonomous smart building.

Free up your time and resources

Say goodbye to time-consuming manual checks by monitoring, managing and controlling assets in real time. Stay alerted to issues as and when they occur, with detailed information and effective solutions.

You'll gain a glowing reputation

Be recognised - and celebrated - for implementing successful energy management strategies.

Ensure a quick return on investment (ROI)

Get excellent value for money, including one of the fastest ROIs in the commercial sector; the payback period is less than a year and sometimes just a couple of months.

Why choose PROActiv Energy?

"With a track record of exceeding energy saving expectations, from multi-building estates to multi tenanted office blocks, bringing PROActiv Energy into your portfolio is the best thing you'll do for your building - and planet. As a PROActiv Energy customer, you'll gain access to an unparalleled level of support and become part of a community that is leading intelligently controlled buildings into a new, sustainable era."

Youssef Ismail Searle - PROActiv Business Development Manager, Kendra Energy Solutions
