

PROActiv Energy

How much energy is your building using and how much could it be saving?

- ✓ Hitting net zero starts with asking yourself a simple question: “is my building as energy efficient as it could be?”.
- ✓ Heating, ventilation and air conditioning (HVAC) account for 40% of a commercial building’s energy spend, on average. That’s huge and comes at a hefty cost - financially and environmentally.
- ✓ PROActiv Energy can help stop unnecessary energy wastage and improve the way your building uses and controls energy.
- ✓ Sub meters - like PROActiv Energy - are now required by law in some buildings (with floor areas over 1000m²), under Part L of the Building Regulations.

How does PROActiv Energy work?

PROActiv Energy is a smart metering solution with sustainability at the core of its design. It encompasses:

- Design of metering system
- Installation of meters
- Installation of data loggers
- Integration with existing BEMS
- Integration with Proactiv Analytics

It breaks down everything you’re using (e.g. electric, water and gas) for a clear and precise picture of how much energy is consumed and where.

PROActiv Energy can be paired with our PROACTiv Analytics software, which displays your energy usage and compares it to average profiles, determining energy saving measures.

Why choose PROActiv Energy

With a track record of exceeding energy saving expectations, from multi-building estates to multi-tenanted office blocks, bringing PROActiv Energy into your portfolio is the best thing you’ll do for your building - and planet. As a PROActiv Energy customer, you’ll gain access to an unparalleled level of support and become part of a community that’s leading intelligently controlled buildings into a new, sustainable era.

What’ll PROActiv Energy do for you?

Save energy and money

By understanding precisely how and where you’re using energy, you can home in on specific energy saving opportunities and slash those energy bills.

Hit net zero goals

The first step to net zero is maximising your energy efficiency. Once you’re using energy as sparingly as possible, you can purchase green energy while safe in the knowledge it won’t go to waste.

Make your building ‘smarter’

Don’t fall behind in an increasingly digital era. Take advantage of the Internet of Things (IOT) to transform your building into an autonomous smart building.

Free up time and resources

Say goodbye to time-consuming manual checks and monitor, manage and control your assets in real time.

Boost reputation

Be recognised and celebrated for implementing successful energy management strategies.

Quick return on investment (ROI)

Get excellent value for money, including one of the fastest ROIs in the commercial sector. Payback is less than a year and sometimes just a few months.
